# FAQ

### Q. How does it work?

Electrical switches in your home are fitted with small concealed controllers (behind the switch gang box) which communicates on wireless technologies with the TalkingHomes application on your android or iOS phone. It's simple & sturdy!

### Q. Why would I like to control my appliances when I am away from home? How does it add value to my day to day life?

Let's see some practical scenarios...

**Scenario 1** - Your maid is alone at home & you don't want her to operate TV, AC, microwave etc. With TalkingHomes solution you can "child-lock" your appliances to control access to each appliance at your home while you are at home or away (job office or shopping, etc.)

**Scenario 2** - Your child returns home from school when you are away & you don't want him or her to operate TV or a microwave etc. You can keep control with TalkingHomes app on your phone. .... Dad, I have done my work, please unlock the TV... a click on the app while sitting in office & there you go!

**Scenario 3** - Till now you may have been switching ON your geysers at night itself for warm water early morning next day. Now you can prevent to switch ON the geyser only for 20 mins (e.g.) in every working day. Talking home lets you schedule the same with feature of scheduling. Your appliances run on schedule decided by you before you are at home or away letting you keep consumption as per actual usage.

**Scenario 4** - You left office in a hurry & forget to switch-off one of the ACs or there was no power at home when you left & AC was ON, but to worry, freely a proactive alert would let you know the same, then you can switch it off using the TalkingHomes app.

**Scenario 5** - You don't want electricity supply to a life-saving appliance of your aging parent, or for example aquarium or refrigerator to be switched-off, even by mistake, TalkingHomes makes it happen by "manual-override" feature built in the child-lock. You can enable or disable devices from anywhere.

**Scenario 6** - You at home keep on running from room to room to switch-off lights, fans etc. You have heard your room say "I keep switching off lights all day! Now don't worry, while watching TV or cooking or reading newspaper out in the lawn you can switch-off all these appliances from your phone. You can also program your application to receive alerts of an appliance being left ON for a long duration.

**Scenario 7** - You have wondered many times... "I really don't know why my electricity bill is so high? What is consuming so much electricity?" With TalkingHomes you get analytics of consumption of each power appliance on daily, weekly or monthly basis. Information is key for you to correct, control & save.

**Scenario 8** - You have old parents at home. When maid leaves after work, she leaves fans or lights on. It may happen multiple times in a day to bother your old parents. They can now check the complete home on the app dashboard & switch-off appliances without having to move around. They can now relax with TalkingHomes & you would save electricity.

**Scenario 9** - You can build preset "Scenes-as-you-Desire". For example, when you are coming back from office, you desire a "Scene" of living room, your side lamp & fan to be ON. Just before you reach home you can switch to "Scene-as-you-Desire" to enter into your desired home which talks to you. Scenes like "Living-Room-Off", "Vacation" etc. can be pre-configured by you.

**Scenario 10** - One of your ACs is ON for more than 5 hours (or as you have configured), you would receive alert on TalkingHomes app. It can be done for any appliance. Live Green!

**Scenario 11** - You have wondered many times... "I really don't know why my electricity bill is so high? What is consuming so much electricity?" With TalkingHomes you get analytics of consumption of each power appliance on daily, weekly or monthly basis. Information is key for you to correct, control & save.

**Scenario 12** - You have old parents at home. When maid leaves after work, she leaves fans or lights on. It may happen multiple times in a day to bother your old parents. They can now check the complete home on the app dashboard & switch-off appliances without having to move around. They can now relax with TalkingHomes & you would save electricity.

**Scenario 13** - You can build preset "Scenes-as-you-Desire". For example, when you are coming back from office, you desire a "Scene" of living room, your side lamp & fan to be ON. Just before you reach home you can switch to "Scene-as-you-Desire" to enter into your desired home which talks to you. Scenes like "Living-Room-Off", "Vacation" etc. can be pre-configured by you.

**Scenario 14** - One of your ACs is ON for more than 5 hours (or as you have configured), you would receive alert on TalkingHomes app. It can be done for any appliance. Live Green!

**Scenario 15** - You don't want electricity supply to a life-saving appliance of your aging parent, or for example aquarium or refrigerator to be switched-off, even by mistake, TalkingHomes makes it happen by "manual-override" feature built in the child-lock. You can enable or disable devices from anywhere.

**Scenario 16** - You at home keep on running from room to room to switch-off lights, fans etc. You have heard your room say "I keep switching off lights all day! Now don't worry, while watching TV or cooking or reading newspaper out in the lawn you can switch-off all these appliances from your phone. You can also program your application to receive alerts of an appliance being left ON for a long duration.

**Scenario 17** - You have wondered many times... "I really don't know why my electricity bill is so high? What is consuming so much electricity?" With TalkingHomes you get analytics of consumption of each power appliance on daily, weekly or monthly basis. Information is key for you to correct, control & save.

**Scenario 18** - You have old parents at home. When maid leaves after work, she leaves fans or lights on. It may happen multiple times in a day to bother your old parents. They can now check the complete home on the app dashboard & switch-off appliances without having to move around. They can now relax with TalkingHomes & you would save electricity.

**Scenario 19** - You can build preset "Scenes-as-you-Desire". For example, when you are coming back from office, you desire a "Scene" of living room, your side lamp & fan to be ON. Just before you reach home you can switch to "Scene-as-you-Desire" to enter into your desired home which talks to you. Scenes like "Living-Room-Off", "Vacation" etc. can be pre-configured by you.

**Scenario 20** - One of your ACs is ON for more than 5 hours (or as you have configured), you would receive alert on TalkingHomes app. It can be done for any appliance. Live Green!

**Scenario 21** - You don't want electricity supply to a life-saving appliance of your aging parent, or for example aquarium or refrigerator to be switched-off, even by mistake, TalkingHomes makes it happen by "manual-override" feature built in the child-lock. You can enable or disable devices from anywhere.

**Scenario 22** - You at home keep on running from room to room to switch-off lights, fans etc. You have heard your room say "I keep switching off lights all day! Now don't worry, while watching TV or cooking or reading newspaper out in the lawn you can switch-off all these appliances from your phone.
